# Colour anodisations

---

---

## DESCRIPTION

Anodisation is an electrochemical treatment. Aluminium is immersed in a chemical bath. Due to the effect of an electrical current, the metal surface is given a decorative, durable, corrosion-resistant and hard-wearing oxidised layer. This aluminium oxide layer is therefore fully integrated with the underlying aluminium.

## ADVANTAGES

- Attractive appearance with the retention of its metallic look.
- Durable, corrosion-resistant and colour-fast.
- Low-maintenance.

For maximum impact choose:

**handles  
for windows, doors and sliding doors  
in the same colour anodisation  
as the aluminium sections.**
